FITNESS CENTER MANAGEMENT SYSTEM

FitHub CRM – Salesforce Implementation

Internship Evaluation Project Documentation

Organization: FitHub Fitness Center

Platform: Salesforce CRM

PROJECT TEAM DETAILS:

S. No	Name of Team Member	Role	Phase/Module Responsible
1	Aakash .U	Team Lead / Developer	Phase-1 / Requirement Analysis& Planning
2	Saiprasanth .K	Developer	Phase-2 / Backend Development &Configs
3	Sanjay .E	UI/UX Designer	Phase-3 / UI&UX development and customization
4	Abilash .P	Tester / Analyst	Phase-4 / Data Migration, Import and testing

1. INTRODUCTION

FitHub CRM is a comprehensive Salesforce-based Fitness Center Management System designed to streamline and digitize the complete operational workflow of a fitness center. In today's competitive fitness industry, managing memberships, trainers, payments, renewals, and performance tracking manually leads to inefficiencies, data inconsistencies, and limited business visibility. FitHub CRM addresses these challenges by providing a centralized, cloud-based Customer Relationship Management platform tailored specifically for gym and fitness center operations.

The system enables structured management of members from registration to membership renewal, including plan selection, payment tracking, trainer assignment, and session monitoring. Automated approval processes ensure that premium or customized plans are validated by management before activation. Record-triggered flows and scheduled automation reduce manual intervention by sending renewal reminders, updating membership statuses, and generating follow-up tasks automatically.

Additionally, FitHub CRM provides real-time reporting and dashboard analytics that help management monitor revenue trends, active memberships, trainer performance, and customer retention metrics. The implementation incorporates Salesforce best practices including secure role hierarchy, profiles, permission sets, validation rules, approval workflows, Apex automation, and Lightning UI customization.

This project demonstrates practical exposure to Salesforce CRM configuration, customization, automation, security modeling, data migration, testing, and deployment strategies. The system is scalable, secure, and adaptable for multi-branch fitness centers, making it suitable for real-world enterprise implementation.

Key benefits include:

• Centralized data storage

• Real-time reporting and analytics

• Automation of repetitive tasks

• Improved customer engagement

• Better operational visibility for management

2. IDEATION PHASE

The ideation phase focused on identifying real-world challenges faced by fitness centers and designing a digital solution.

Problem Statement:

Fitness centers often face:

• Difficulty in tracking memberships manually

• Missed renewal opportunities

• Lack of transparency in trainer assignments

• Inefficient reporting systems

• Delays in approval processes

Proposed Solution:

The proposed system leverages Salesforce CRM to:

• Automate membership lifecycle

• Digitize payment tracking

• Implement approval workflows

• Provide dashboards for insights

• Enable seamless trainer-member management

This phase laid the foundation for building a scalable and efficient CRM solution.

3. REQUIREMENT ANALYSIS

3.1 Functional Requirements

- FR-1: User Authentication and Role-based Login
- FR-2: Member Record Creation and Management
- FR-3: Membership Plan Assignment
- FR-4: Payment Recording and Tracking
- FR-5: Premium Plan Approval Process
- FR-6: Automated Renewal Reminder Flow
- FR-7: Report and Dashboard Generation

3.2 Non-Functional Requirements

- Usability – Easy Lightning Interface
- Security – Role hierarchy and field-level security
- Performance – Fast loading dashboards
- Availability – 24/7 cloud access
- Scalability – Support for multi-branch expansion

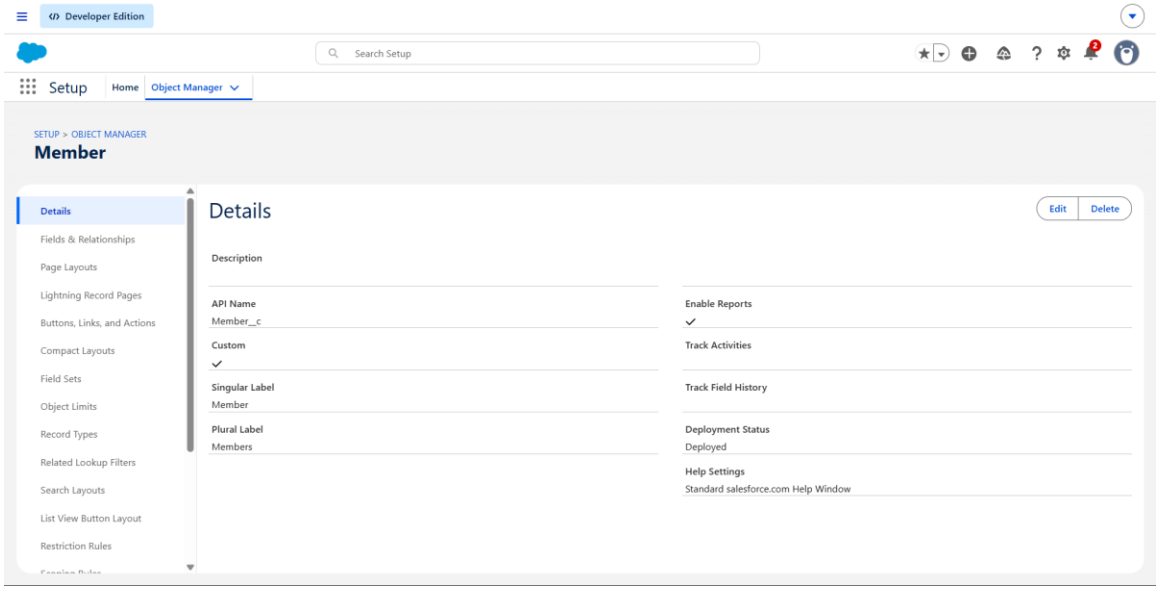
This phase ensured clarity in system expectations and design direction.

4. SYSTEM DESIGN

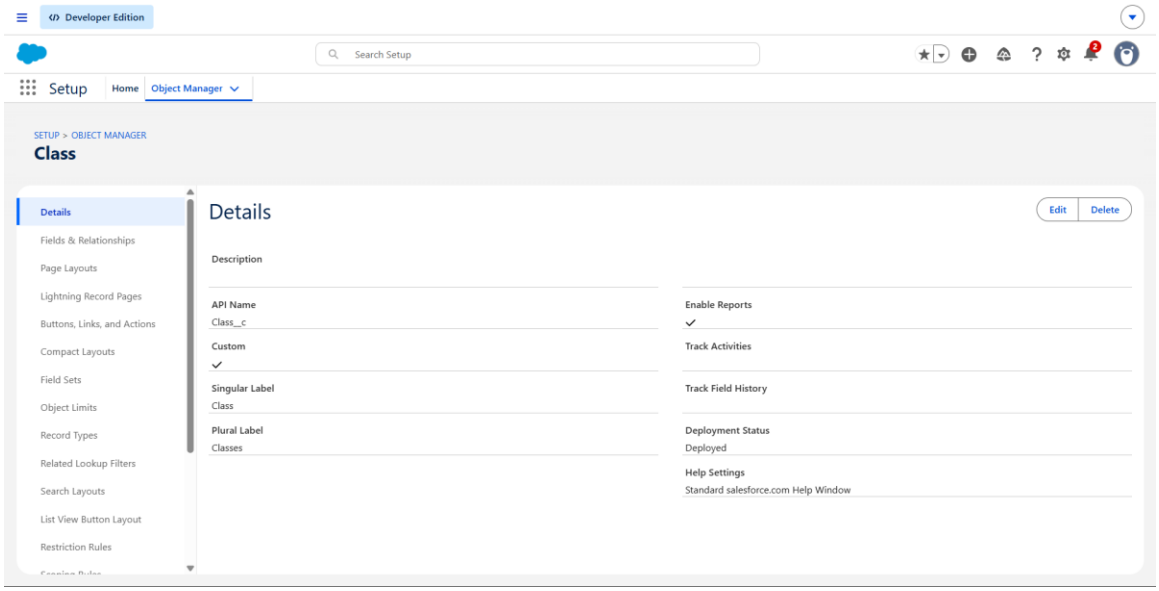
4.1 Data Model Design

Custom Objects Created:

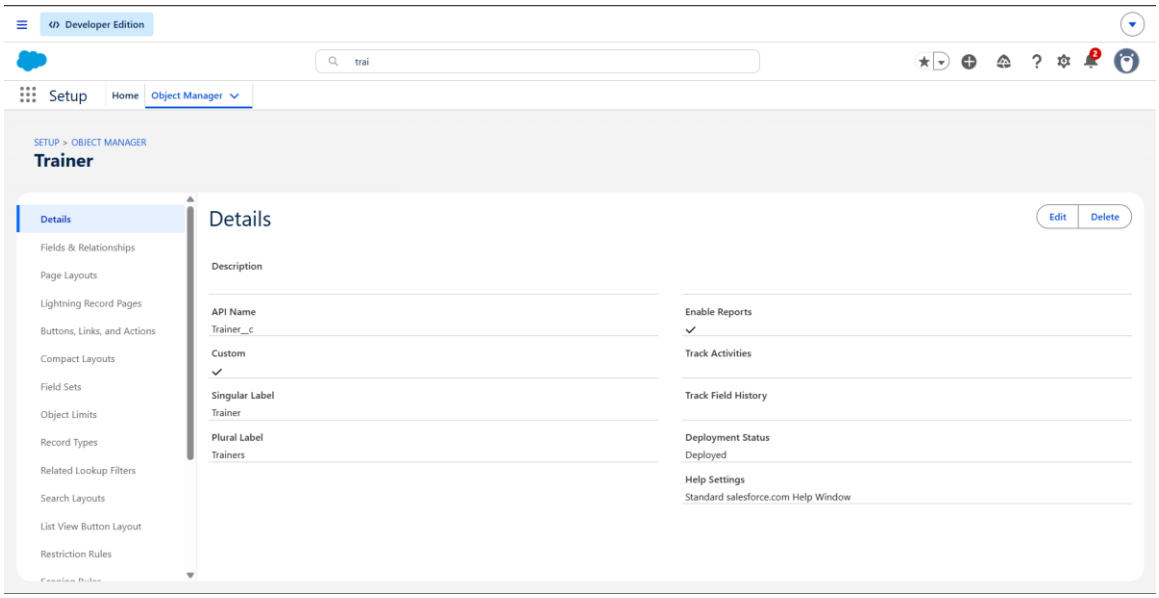
- Member



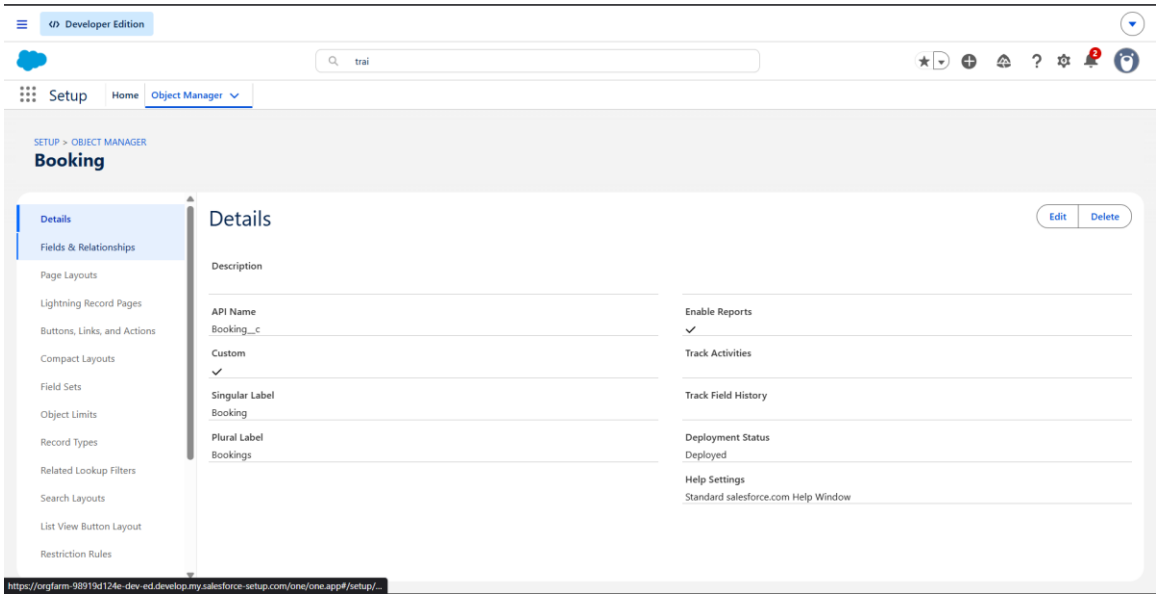
- Class



- Trainer



- Booking



Relationships were established using Lookup and Master-Detail relationships. Field history tracking enabled for payment status and membership status.

4.2 Architecture Layers

- Presentation Layer – Lightning UI
- Application Layer – Flows, Validation Rules, Apex

- Data Layer – Custom Objects & Fields
- Analytics Layer – Reports & Dashboards

This modular design improves maintainability and scalability.

5. PROJECT PLANNING & AGILE EXECUTION

The project followed Agile methodology with sprint-based development. Each sprint focused on specific modules such as data modeling, automation, security, and analytics.

5.1 Sprint Breakdown:

- Sprint 1 – Environment Setup & Object Creation
- Sprint 2 – Field Configuration & Page Layouts
- Sprint 3 – Validation Rules & Flows
- Sprint 4 – Approval Process & Apex
- Sprint 5 – Reports & Dashboards
- Sprint 6 – Testing & Deployment

5.2 Benefits of Agile:

• Faster delivery cycles
• Continuous feedback
• Better risk management
• Improved team collaboration

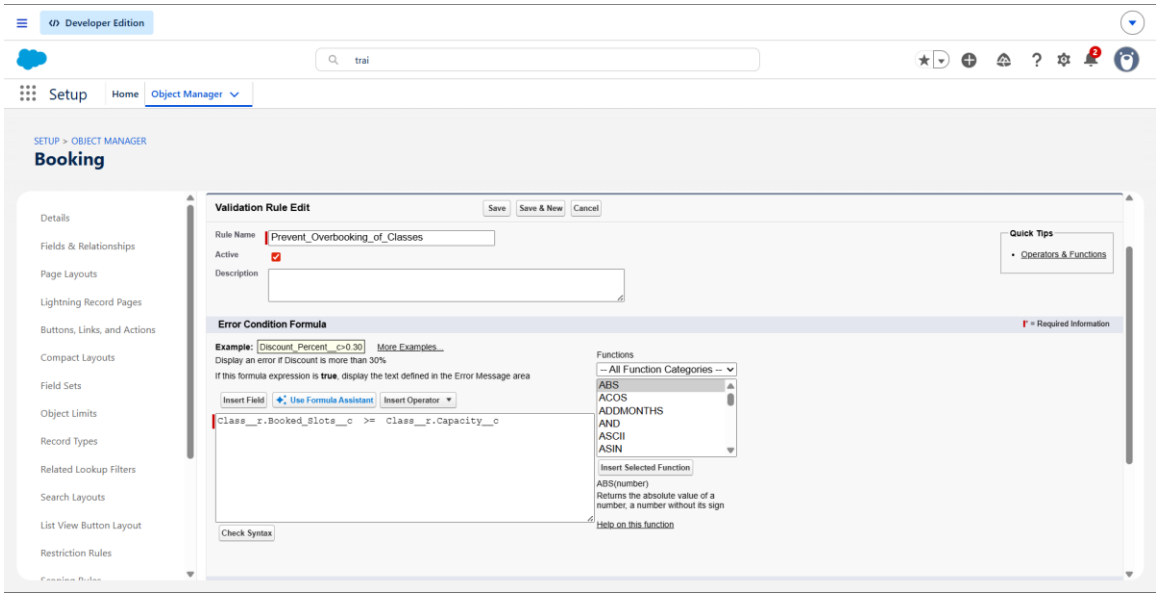
6. DEVELOPMENT PHASE

6.1 Object Configuration

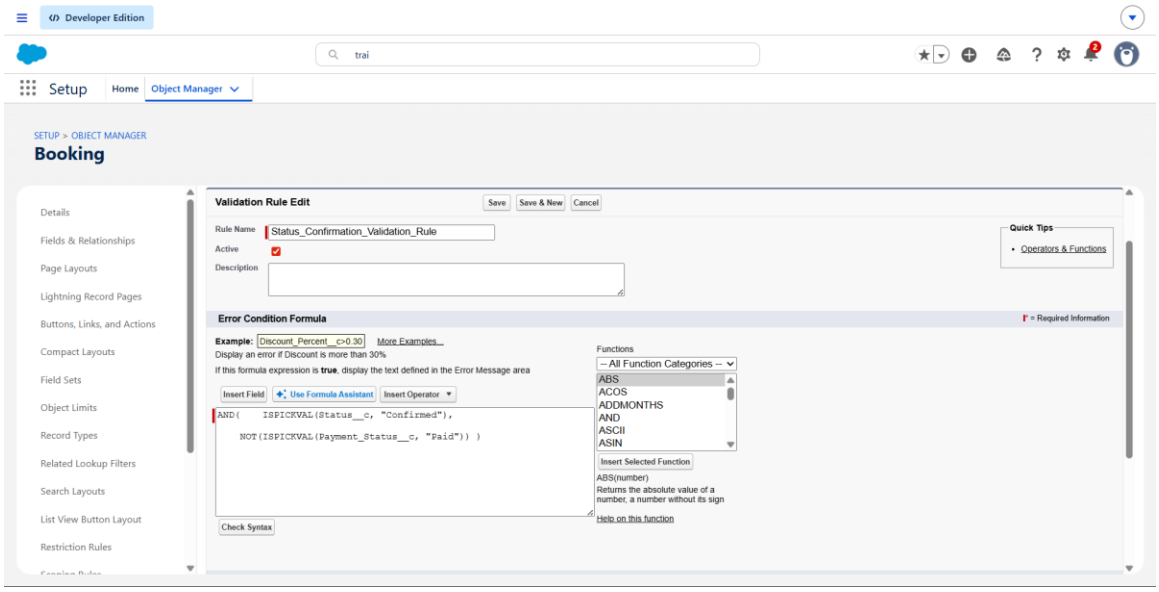
Custom objects were created using Object Manager. Required fields, picklists, lookup relationships, and formula fields were configured.

6.2 Validation Rules

Validation rules ensure data accuracy. Examples include membership end date validation, positive payment amount validation, and mandatory trainer assignment for activation.



Same applies for Status verification process also….

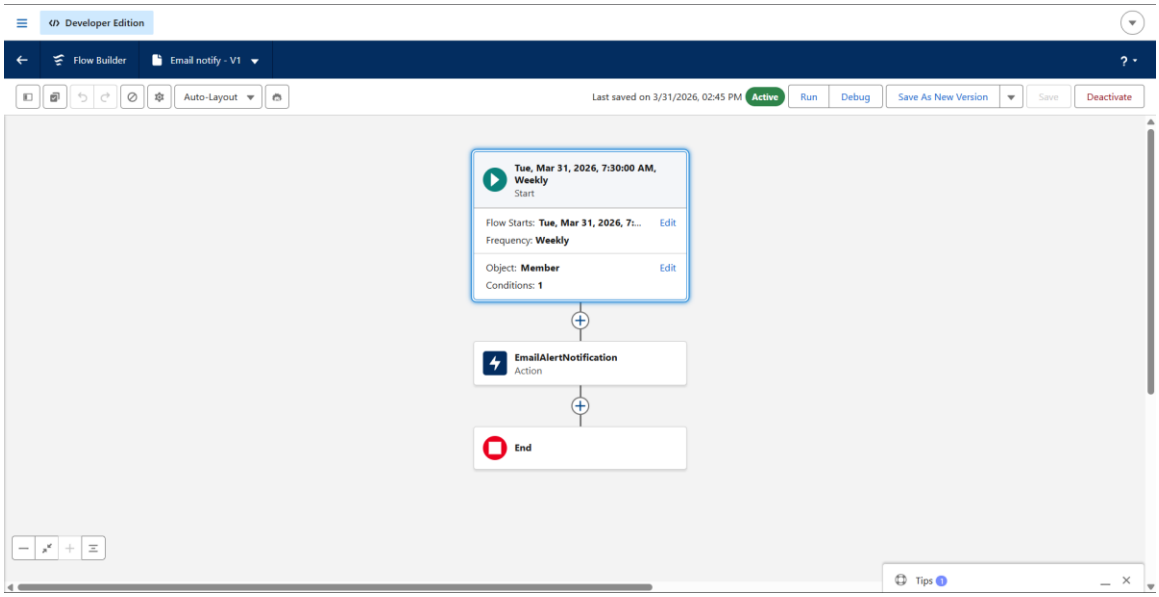


6.3 Approval Process

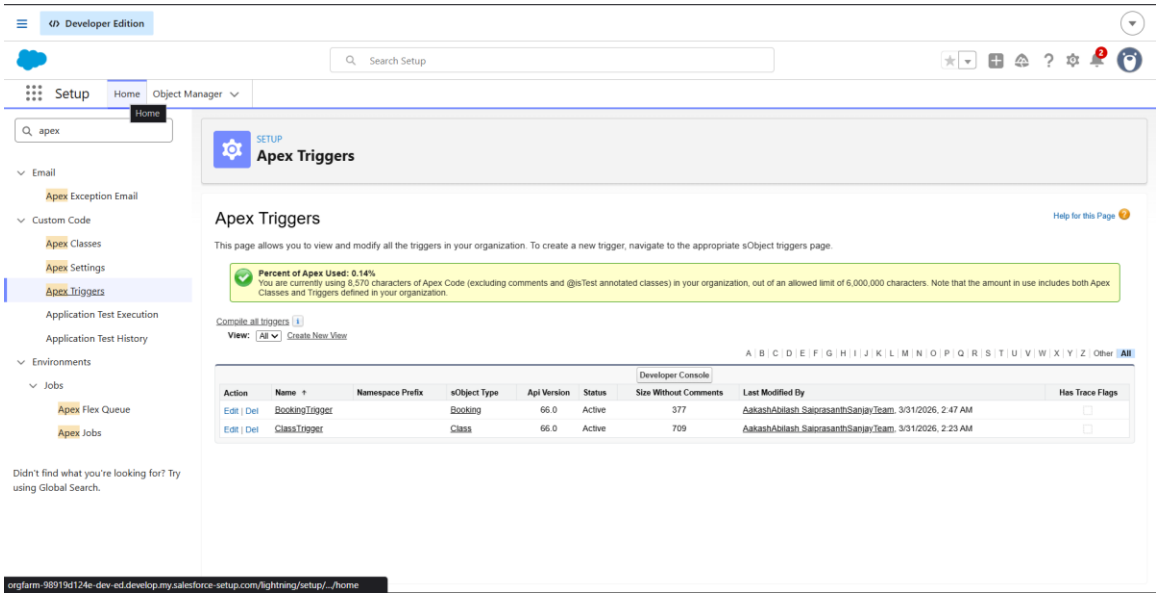
Premium membership plans require manager approval before activation. Approval workflow updates status automatically upon final approval.

7. AUTOMATION & BUSINESS LOGIC

Record-triggered flows automate membership activation upon payment confirmation. Scheduled flows send renewal reminders before expiration.



Apex Trigger implemented to mark memberships as expired automatically when the end date is reached.



Key Automations:

• Record-triggered flows for activation

• Scheduled flows for renewal reminders

• Apex triggers for automatic status updates

Benefits:

• Reduced human intervention

• Increased accuracy

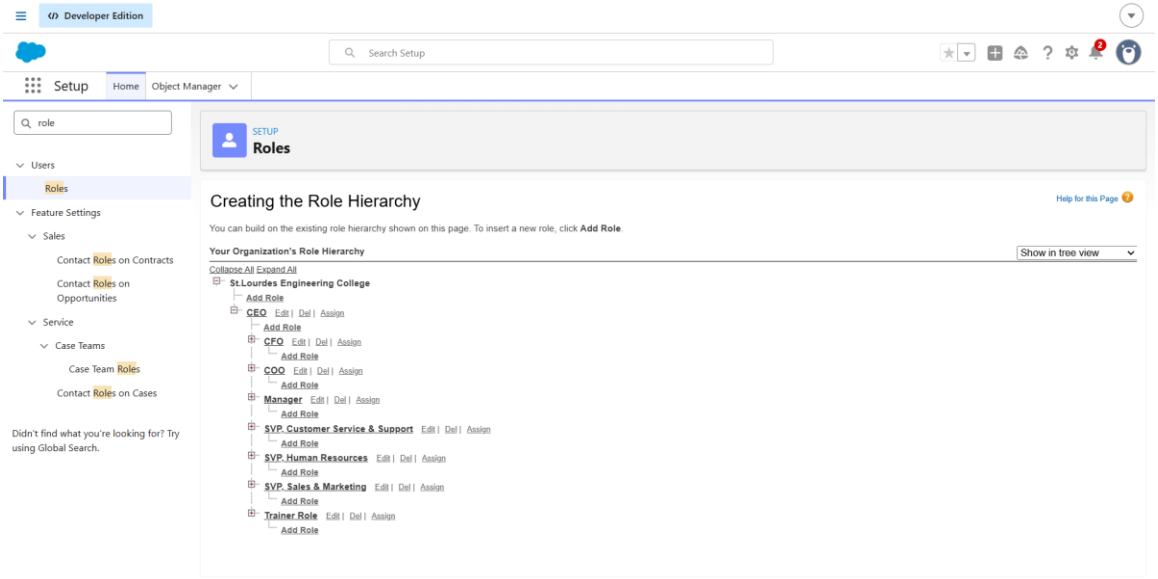
• Time savings

• Consistent process execution

8. SECURITY MODEL IMPLEMENTATION

Security implemented using Profiles, Roles, Permission Sets, and Sharing Rules.

- Role Hierarchy: Admin > Manager > Front Desk > Trainer



- Field-Level Security for Payment Amount
- Object-Level Permissions based on Profiles
- Private Sharing Model with Role-based visibility

Components:

- Profiles for user permissions
- Role hierarchy for data visibility
- Permission sets for additional access
- Sharing rules for collaboration

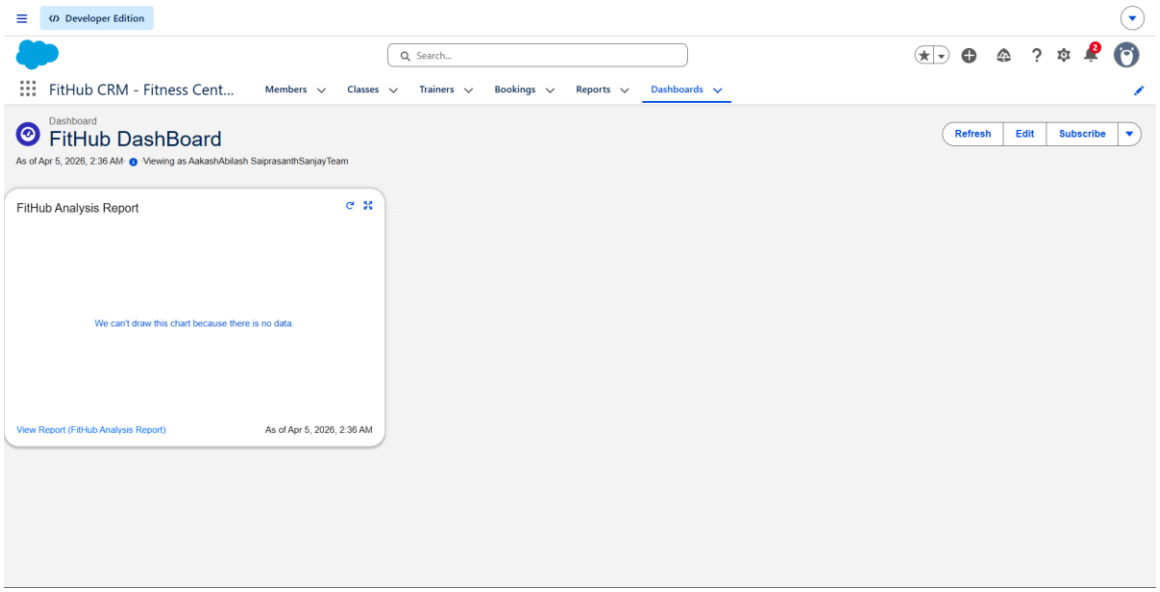
Security Features:

- Field-level security for sensitive data
- Object-level access control
- Private data sharing model

This ensures that only authorized users access relevant data.

9. REPORTS & DASHBOARDS

Custom reports created for Active Members, Expired Memberships, Revenue Overview, and Trainer Assignments.



Dashboards display monthly revenue trends, membership distribution charts, and trainer performance metrics.

Analytics play a key role in decision-making.

Reports Created:

• Active members report

• Expired memberships report

• Revenue summary

• Trainer performance

Dashboards:

• Monthly revenue trends

• Membership distribution

• Trainer workload analysis

Benefits:

• Data-driven decisions

• Real-time insights

• Performance tracking

10. TESTING & VALIDATION

Testing included unit testing of Apex classes, validation rule testing, flow execution testing, and report accuracy verification.

- Test Case 1 – Member Creation
- Test Case 2 – Premium Plan Approval
- Test Case 3 – Automatic Task Creation
- Test Case 4 – Renewal Reminder Flow
- Test Case 5 – Revenue Report Accuracy

11. DEPLOYMENT STRATEGY

Deployment performed using Change Sets from Sandbox to Production. Pre-deployment validation and post-deployment testing ensured smooth transition.

Steps:

• Sandbox testing

• Change set creation

• Validation before deployment

• Production deployment

• Post-deployment testing

Benefits:

• Controlled release process

• Reduced risk of errors

• Smooth transition

12. MAINTENANCE & MONITORING

Regular monitoring of flow errors, debug logs, and user access permissions is conducted. Periodic data cleanup and optimization are scheduled.

Activities:

• Monitoring system logs

• Fixing errors

• Updating permissions

• Data cleanup

Importance:

• Ensures system performance

• Improves reliability

• Keeps data accurate

13. ADVANTAGES & LIMITATIONS

Advantages:

- Centralized data management
- Automation reduces manual workload
- Improved decision-making through analytics

- Secure cloud-based storage

Limitations:

- Requires Salesforce licensing
- Dependent on internet connectivity
- Initial training required for staff

14. FUTURE ENHANCEMENTS

- AI-based personalized fitness recommendations
- Integration with wearable fitness devices
- Chatbot integration for member support
- Multi-branch expansion capability
- Mobile application integration

15. CONCLUSION

FitHub CRM successfully digitizes fitness center operations by automating membership management, trainer assignments, payment tracking, and analytics reporting. The implementation demonstrates strong understanding of Salesforce development, configuration, automation, security, and deployment processes. The system is scalable, secure, and suitable for real-world business operations.
